

2016 Services Wade Creek Clinic

Primary and Preventative Care

Medical Assessment and Treatment

Injury treatment and a triage of more serious injuries - Skin biopsies, stitches, wound care, ear infection, respiratory conditions, sore throat, and minor episodic illnesses such as joint injections muscular skeletal strains and sprains. General illness and conditions that don't require emergency, hospital, or specialist care. Chronic disease management (including diseases such as diabetes, asthma, migraines, high blood pressure) and referrals to specialty care.

Prevention and Wellness

Prevention and Wellness services include annual checkups, sports physicals, pediatric care for all ages, mental health screenings, alcohol/drug use screenings, recommendations for future health and well-being, coaching for positive lifestyle changes, and vision and hearing testing

Diagnostic Testing

Some lab tests are done in house such as pregnancy testing, rapid-strep testing, influenza testing, urinalysis, blood glucose, hemoglobin A1c, TB testing, and EKGs. All other labs will be sent to a full-scale lab facility where they will usually be processed same-day.

Immunizations

Children can receive all required immunizations for all ages at Orchid Health, while adults can receive most immunizations as clinically recommended. Influenza vaccines and Pneumococcal vaccines are also available for adults as well as children.

Counseling and Therapy Services

Adult Counseling

Counseling is currently available through our partnership with Trillium Family Services, who have two therapists serving children, adolescents, and their families. Orchid will be hiring our own counselors soon - stay tuned.
